

# Model F-core research-use risk calculator

OAI-derived common-variable model with optional imaging-setting recalibration

## Inputs

Age, years

64

Sex

Female

Knee side

Right

Pain score, 0–10

6

Baseline KL grade

3

24-month KL grade

4

KL worsening

Auto: yes

**Original OAI-derived estimate**  
**24-month knee-replacement risk: 21.0%**  
**60-month knee-replacement risk: 52.7%**

**MRKR imaging-setting recalibration**  
**24-month hardware-detection risk: 54.8%**  
**Research interpretation: very high risk stratum**

**RESEARCH USE ONLY**  
**Not validated for individual clinical decisions.**  
**Hardware-detection risk is not exact operation-date risk.**  
**Local validation and recalibration are required.**

Model F-core v1.0 | Formula: OAI Cox model + target-setting recalibration
