

Model F–core research–use risk calculator

OAI–derived common–variable Cox model with optional local recalibration

Inputs

Age

64 years

Sex

Female

Pain score

6 / 10

Baseline KL

2

24–month KL

3

Recalibration

MRKR

KL worsening is derived automatically from paired KL grades.

Outputs

24–month recalibrated risk
31.6%

Risk stratum
25–50%

Interpretation
Elevated research risk stratum

Version 0.1 | Formula basis: OAI Model F–core | Local recalibration: MRKR slope + baseline

**Research use only. Not validated for clinical decisions, surgical indication,
or individual treatment without prospective local validation.**
