

Differences in follow-up and outcome-ascertainment structure between OAI and MRKR

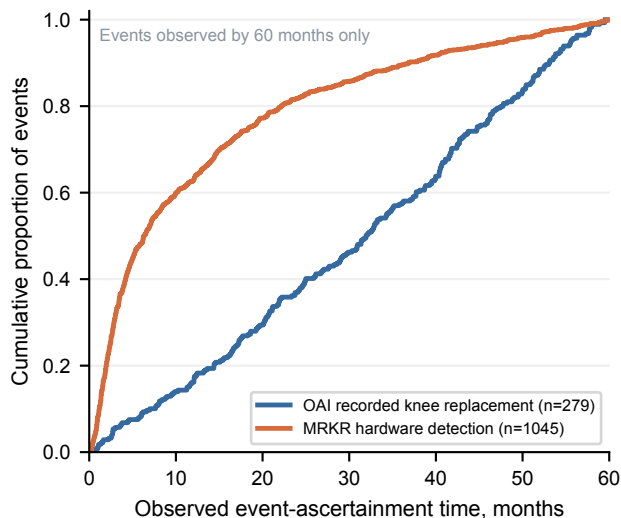

A. OAI recorded post-landmark knee replacement

B. MRKR first side-specific hardware detection

C. Event-ascertainment times among event knees

D. MRKR interval-censored event time

L_i Last side-specific hardware-negative image R_i First side-specific hardware-positive image

The underlying arthroplasty was assumed to have occurred within $(L_i, R_i]$

Median interval: 83 days

IQR: 43–157 days

96 intervals >365 days; 62 crossed the 24-month horizon
